- 15.000+ supply chain partners
- 92+ countries

Setlog knows the challenges of global supply chains

The increasing complexity and unpredictability of global supply chains have drastically changed the demands for global sourcing and logistics. Data silos, a lack of transparency, excessive workloads due to an overload of emails and Excel lists as well as geopolitical circumstances have generated high operational challenges. New legislations on sustainability and social standards also pose additional legal risks. This affects day-to-day business:

No Single
Point of Truth

Lack of
control

Lost sales
revenue

Uncertainty

High process
costs

Margin pressure

OSCA

OUR SOLUTION: OSCA!

Setlog's Online Supply Chain Accelerator (OSCA) provides you with an effective, cloud-based and standardized software for transparent supply chain management. OSCA connects all partners in the supply chain on a single platform, allowing you a centralized consolidation of data, documents and communication. Its key strength lies in purchase order management, which efficiently records and monitors all critical milestones in global order processing - from production and quality control to logistics processing and delivery to the warehouse. The seamless integration of this data with existing inventory systems guarantees complete and seamless control of your entire supply chain with just one tool.
